Tables

- Tables are meant to display tabular data in a web page
- Tables have been hijacked by website designers to design and position web content
- Here we discuss tables as they are originally meant to be used

Example Table

Facts & Figures

	2013	2014	2015
Employees	15	30	40
Guests Served	15000	45000	100,000
Special Events	3	20	45
Annual Turnover	$251,325	$1,250,375	~$3,000,000

Bootstrap Tables

- Always start by assigning the table class to tables:

  <table class="table">

  </table>

Bootstrap Tables

- *table-striped* for zebra striped rows
- *table-bordered* for borders to table cells
- *table-hover* for highlighting rows when you hover over a row
- *table-sm* for cutting the cell padding in half
- *table-responsive* for making the tables responsive. Can horizontally scroll tables on screen sizes less than 768px.

Bootstrap Table Contextual Classes

- Individual rows or cells can be colored using the following classes: *active, success, info, warning* and *danger*

    <tr class="bg-success"> … </tr>

    <td class="bg-danger"> … </td>
