User Input

- User input to a web page can be facilitated through three approaches:
  - <a> tags to provide hyperlinks
  - <button> tags to create buttons
  - <form> to create forms
    - <input> to create elements in forms

Buttons

- Simple interaction
  - Clicking of the button
- Button behavior dependent on where it is positioned:
  - Inside a form it takes on specific role
  - General purpose outside
- <a> can also be styled using CSS to look like a button

Forms

- Form elements:
  - <input>
    - type: text, password, submit, radio, checkbox, button, color, date, datetime, email, month, number, range, search, tel, time, url, week
  - <textarea>
  - <button>
  - <select>
